📖 Manual of Me

Profile

Seasoned Full-Stack Web Developer with a decade of cross-functional professional experience.

Proven leader in systems design and administration, software migration and integration initiatives, and scaling enterprise-level applications, consistently increasing operational efficiency and reducing costs.

Adept at fostering technical excellence and delivering high-quality, mission-critical solutions.

Education

2023 - present **University “V. Alecsandri”** Computer Science (*Bacau, Romania*)
2004 - 2009 **National College “G. R. Codreanu”**, Informatics and Mathematics (*Barlad, Romania*)

Employment History

2019 - present **Straja**, Founder & Technical Consultant (*Remote, Europe*)

- Established a business providing client-oriented software on-demand, being a technical consultant for a variety of enterprises and projects
- Developed strong partnerships with other businesses to allow for collaboration and more significant opportunities for growth until this day
- Helped dozens of small companies with building presentation and eCommerce websites using WordPress and Woocommerce
- Maintained a thorough understanding of industry best practices, continuously updating technical skills to stay current with advances in the field
- For my main business partner, I reduced CLI and deployment times by 10 hours per week and doubled release frequency by using Buddy
- Championed Agile methodologies within the client’s environment, fostering increased adaptability in response to changing project requirements
- Main toolset: Javascript, Node.js, Typescript, Ionic, mySQL, AWS(ec2, s3, SQS, SNS, SES, etc), PHP, Laravel, Material-UI, html/sass, WordPress, Woocommerce, Buddy, Postman

Employment History (continued)

2023 - 2024

Cognizant, Full Stack Software Developer (*Remote, Romania*)

- Software Migration Consultant in the life sciences sector for an industry leader, addressing project deviations for a computerized software system dealing with the problem of data security
- Led backend migration from Express.js to NestJS, driving improved scalability and maintainability
- Modernized the Electron client: replacing a legacy Vue.js design system with a newer UI framework and moved the build system from Webpack to Vite, optimizing performance and developer productivity
- Documented Azure Cloud project resources ending with multiple decommissions, reducing monthly use cost by thousands of dollars
- Main toolset: Express.js, NestJS, Node.js, TypeScript, Electron, Vue.js, Vite, Azure DevOps, GitHub Actions, PostgreSQL, Redis, Docker.

2020 - 2023

Superbet, Full Stack Software Developer (*Remote, Romania*)

- My main work involved rewriting a main PHP monolith legacy back-office application, towards a microservices architecture system hosted on AWS
- Played a key backend engineering role in launching new retail platform, supporting a user base of up to 1 million users
- Owned end-to-end feature development, with latter additions impacting the whole business, while meeting company OKRs and KPIs
- Drove code optimizations and refactoring - consecutive highest lines-deleted metric annually-earning successive promotions
- Main toolset: Node.js with NestJS and TypeScript, MySQL, MongoDB, Vue.js, Docker, Traefik, Minio, AWS(S3, RDS, Dynamo, Cognito, CloudWatch), NATS, Redis, Postman, Grafana/Prometheus/Loki

2018 - 2019

Udev Office, Backend Web Developer (*Bucharest, Romania*)

- Joined a blockchain startup which will become the regions' most successful, working on a platform designed for Initial Coin Offering (ICO) token launches
- My focus was in the areas of data visualization leveraging D3.js together with web3.js for interacting with the Ethereum blockchain
- Contributed to a blockchain exchange platform, by testing Zeppelin-Solidity against Truffle framework
- Main toolset: Node.js, Express.js, D3.js, Web3.js, Solidity, Truffle, Mocha, Chai, Infura.

Employment History (continued)

- 2018 – 2019 **Streamwide**, Front End Web Developer (*Bucharest, Romania*)
- Spearheaded the development and integration of a Reseller platform into the existing suite of telecom products
 - Implemented protocol updates and leveraged WebRTC and Audio Media Stream API, to enhance the flagship product capabilities
 - Ensured cross-browser compatibility, meticulously testing the application across various web browser engines using BrowserStack
- 2018 – 2018 **Extia**, Front-End Web Developer (*Bucharest, Romania*)
- Contractor in the banking industry, I led the migration strategy to transition legacy web clients built with jQuery to Angular 2
 - Researched and developed a proof-ofconcept using single-spa to replace HTML iframes, enabling a microservice architecture on the frontend
 - Main toolset: JQuery, Angular 2, rxjs, single-spa.
- 2017 – 2018 **Luxoft**, Front-End Web Developer (*Bucharest, Romania*)
- Contractor in the telecom industry, I rewrote the Client's Survey app using Angular2 and Material, as the solo frontend developer.
 - The app featured zero functionality issues in month post-release, achieving testable 2× to 10× performance gains
 - A challenge of the project was using the beta version of Angular 2, and managing the fast initial release, changes and bugs but also switching in early development to pioneer-use of centralized state management, as soon as the NgRx was released (the inspiration for the vuex, redux)
 - Main toolset: Angular 2, Material, RxJS, NgRx, Jasmine, Karma
- 2015 – 2017 **Cloud Business Services**, Web Developer (*Bucharest, Romania*)
- Joined and eventually led a small new internal team, spearheading the company's new web agency studio focused on WordPress presentation and ecommerce websites for local businesses
 - Oversaw the complete software development lifecycle, from client engagement and technical implementation to product launch and maintenance
 - Led the development of a timesheet management tool using AngularJS and Node.js, helping my employer and my outsourced colleagues
 - Main toolset: WordPress, WooCommerce, angular.js, node.js.

Employment History (continued)

- 2014 – 2015 **RoundAssist**, Software Developer (*Barlad*)
- Helped the migration effort of a student management platform from Microsoft Access to a LAMP stack built application
 - Own the migration process of the old data into the new storage server system, using Razor ETL for the seamless integrity-preserving data transfer process
 - Main toolset: PHP, Symfony 2, PostgreSQL, Razor ETL, Microsoft Access, Visual Basic for Applications
- 2014 – 2014 **AccordGrup**, Web Developer (*Barlad*)
- Managed and enhanced a custom auto-parts eCommerce platform built on CodeIgniter
 - Synchronized the autoparts database, having millions of entries, with a vendor API for real-time pricing
 - Main toolset: CodeIgniter PHP framework, MySQL, JavaScript, jQuery, HTML, CSS

Awards and Achievements

Many of my most meaningful career milestones are not publicly documented, as they involved work in areas such as reverse engineering, open-source and copyleft software, defeating advanced fingerprinting systems, and pioneering national-scale online gaming server hosting almost 20 years ago.

I also won first place in a hackathon by porting low-level cryptographic primitives to WebAssembly for use in web environments — a project later recognized by GitHub's *Arctic Code Vault*.

Just as important as my successes, I maintain a private record of failures that have shaped my judgment.

I believe I now know more about what *not* to do than what to do — a perspective that informs my work in consulting and software development.
